Introductory note

This introductory note does not form a part of the permit

The main features of the facility are as follows. The facility is a metal recycling operation. The site is predominantly used for the storage and treatment of furnace ready metal grades, namely grades 1, 2 and oversize. Other grades such as light iron, may require processing to facilitate size reduction, densification and to improve the metal content to a required quality to be accepted at furnaces. Treatment of scrap grades will generally consist of gas cutting /grinding, sorting, bulking up, shearing, tromelling and baling. The site will not accept hazardous waste, including undepolluted end of life vehicles and batteries.

The status log of the permit sets out the permitting history, including any changes to the permit reference number
